# 1 Circuit design using NAND/NOR gates

**Example 1.** Implement the function  $f(x_1, x_2, x_3) = \sum m(2, 3, 4, 6, 7)$  using (1) NAND gates only and (2) NOR gates only.

**Remark 1.** NAND-NAND logic is generated from SOP form. NOR-NOR logic is generated from POS form.

**Remark 2.** NOT gate can also be created from a NAND gate  $\bar{x} = \overline{x \cdot x}$ .

**Remark 3.** NOT gate can also be created from a NOR gate  $\bar{x} = \overline{x + x}$ .

**Problem 1.** Design the simplest circuit that implements the function  $f(x_1, x_2, x_3) = \sum m(3, 4, 6, 7)$  using (1) NAND gates only (2) NOR gates only.

#### 2 PI Table reduction and Petrick's method

This is not in the text-book. For additional reading, please refer to the linked resources on the website.

**Definition 1** (Implicant). Given a function f of n variables, a product term P is an implicant of f if and only if for every combination of values of the n variables for which P = 1, f is also equal to f.

**Definition 2** (Prime Implicant). A prime implicant of a function f is an implicant which is no longer an implicant if any literal is removed from it.

There are 4 main steps in the Quine-McCluskey algorithm/PI Table reduction and Petrick's method:

- 1. Generate Prime Implicants
- 2. Construct Prime Implicant Table. PIs as columns, and minterms as rows (don't cares are excluded).
- 3. Reduce Prime Implicant Table by repeating following steps until they it cannot be reduced further
  - (a) Remove Essential Prime Implicants
  - (b) Row Dominance: Remove dominating rows. (i.e. unnecessary minterms)
  - (c) Column Dominance: Remove dominated columns. (i.e. remove unnecessary PIs)
- 4. Solve Prime Implicant Table by Petrick's method

#### 2.1 Generate Prime Implicants

**Example 2.** Generate prime implicants of the function  $F(A, B, C, D) = \sum m(0, 2, 5, 6, 7, 8, 10, 12, 13, 14, 15)$  using Quine-McCluskey method

Steps:

1. Start with writing minterms in binary format (include don't cares as minterms).

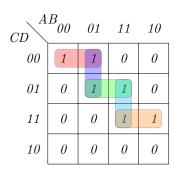

- 2. Create potential groups of minterms that can be combined (merged). The only minterms that can be combined differ only be single 1. Create a new list of combined minterms as n-1 literal implicants.
- 3. Check off the minterms that could be combined. Unchecked minterms are prime implicants (PIs).
- 4. Repeat the grouping process with n-1 literal implicants.

**Problem 2.** Generate PIs for the function  $F(A, B, C, D) = \sum m(0, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13)$ .

# 2.2 Prime Implicants table and reduction

**Example 3.** Reduce the prime implicants  $\{\bar{B}\bar{D}, C\bar{D}, BD, BC, A\bar{D}, AB\}$  using prime implicants table.

Example 4.

Example 5.

CD $A$	$B_{00}$	01	11	10	
00	d	0	0	0	
01	1	1	d	d	
11	1	1	0	0	
10	1	d	0	0	

Example 6. Reduce the following PI table

<b>Example 6.</b> Reduce the following PI table									
	$\bar{A}\bar{D}$	$\bar{B}\bar{D}$	$\bar{C}\bar{D}$	$\bar{A}C$	$\bar{B}C$	$\bar{A}B$	$B\bar{C}$	$A\bar{B}$	$A\bar{C}$
0	X	X	X						
2	X	X		X	X				
3				X	X				
4	X		X			X	X		
4 5						X	X		
6	X			X		X			
$\gamma$				X		X			
8		X	X					X	X
g								X	X
10		X			X			X	
11					X			X	
12			X		X		X		X
13							X		X

## 2.3 Petrick's method

Example 7. Solve the Prime Implicant table using Petrick's method

	$p_1 = \bar{A}C$	$p_2 = \bar{B}C$	$p_3 = \bar{A}B$	$p_4 = B\bar{C}$	$p_5 = A\bar{B}$	$p_6 = A\bar{C}$
3	X	X				
5	77		X	X		
$\frac{7}{6}$	X		X		$oldsymbol{v}$	V
9		v			X $V$	$\boldsymbol{A}$
$\begin{vmatrix} 11 \\ 13 \end{vmatrix}$		Λ		X	Λ	X
10				Λ		

**Example 8.** Find the minimum SOP expression for the function  $F(A, B, C, D) = \sum m(2, 3, 7, 9, 11, 13) + \sum d(1, 10, 15)$  using Quine-McCluskey method.
